

**Single header (80 bits):**

| Identifier | Payload length | CRC-32 |
|---|---|---|
| 16 bits | 32 bits | 32 bits |

Each pilot and data symbol contains $N$ samples.

The pilot is deterministic;
the data symbol is $\alpha$-stable.

Green blocks are $\alpha$-stable; all other packet components are deterministic.

Complete packet: $(32 + 240 + 2B + 8)N$ complex samples
